Optimized Trading is a quantitative trading firm that brings highly adaptive algorithmic trading and investing programs to both individual investors and asset managers. We provide proprietary strategies that use machine learning processes with other dynamic applications to analyze market data and identify optimal strategic models for current and projected market environments. The Atlas systems are a collection of Alpha producing models designed specifically for Micro Index Futures markets. These models incorporate a variety of data types including our proprietary formulas. Each system employs dynamic entry, exit and money management concepts.

Optimized Trading offers multi-model trading and investing systems for large cap stocks, ETF's, and futures (index, bond and crude). In highly liquid and ever-evolving markets, deploying an adaptive systematic approach is essential. We aim to deliver consistent absolute returns, efficient risk mitigation and creative methods of diversification to our clients.
